

Requirements For CD/DVD Face Printing

- Please supply a digital file.
- For best results provide artwork at a minimum resolution of 300dpi.
- It is preferable for you to supply us with a photoshop (psd), tiff, pdf or bmp file and a colour laser copy/proof of your graphics.
- Please design within a 122mm x 122mm square (this allows for a 4mm bleed area beyond the 118mm disc edge)
- We can print right over the center hub of the disc if required (shown below in grey). You may design either to the 23mm ring area OR the 39mm ring area.
- Please do not include any guide rings in your artwork. (118mm disc edge, 39mm/23mm center hub). All that we require is a 4mm bleed area beyond the 118mm outer disc edge and to the inside of the 23mm/39mm inner center hub.
- The image shown below is not to scale!!!
